

# Doors and windows

When safety matters

### Blast mitigation

The blast mitigation system includes both commercial off-the-shelf solutions as well as tailored made projects. All products are based on an energy absorbing system.

The products we offer meet the highest blast protection requirements.

### Ballistic resistance

The product provides effective protection against a variety of ballistic threats.

### Forced entry protection

The products meet the demands for protection against forced entry according to EN standards.

### Features & benefits

- Customised solutions which take consideration to specific architectural requirements, including those of historical value, as well as listed buildings.
- Available as fixed or operable windows with tilt, turn or sliding features and as curtain walls.
- Easy installation in new as well as older buildings. Can be fitted behind existing windows.
- Anchorage minimum interfering with the buildings components.
- We provide Curtin Walls for all blast levels, designed in a fashion which allows for them to function independently or integrated within an existing structure in all building types.

### Evidence-based technology

The system has an outstanding ability to limit the level of load transfer to surrounding walls. In this way, a blast is easily contained, should a bomb hit. This eliminates the need for massive, ungainly window frames and heavy glazing units that detract from the building's overall appearance.

When mounted in existing buildings, the windows provide an exceptional level of blast and ballistic protection. No heavy additional reinforcement is required to secure building openings.

## Why call anyone else?

Bringing in many different contractors to supply and fit a physical protection system is complicated and often does not give the best result. With Damasec, you don't have to. We find the best total solution and install it on your premises.

Ethical. Proactive. Confidential. Our values guide everything we do.
