

Composite wall

When safety matters

Composite wall solutions

The Composite Wall offers unique protection which can be integrated throughout an entire building. It can be built as a system against blasts, ballistic threats and forced entry.

Flexible solutions

We can design Composite Wall solutions for internal building protection, combined with doors and windows. However, it can also be applied as a stand-alone wall protector on the inside of a weak existing wall.

Installation

The product is easy to install in any environment, and does not require the use of heavy or large machinery. Furthermore, we can easily provide professional craftsmen and fitters all over the world.

Features and benefits:

- Can be utilized for numerous objectives.
- Adaptable
- Flexible and sustainable durability.
- Tailor made solutions incorporating complete design of the solution.
- Practical lightweight design.
- Can accommodate all geometric widths, depths and thickness.
- Continual development enhanced by progressive updating of the product.

Evidence-based technology

Numerous blast test and demonstrations provide evidence that the composite wall offers a unique protection solution easily applicable to weak existing walls, as well as supporting the weight of the protection windows. The composite wall solution meets the highest blast protection requirements.

Why call anyone else?

Bringing in many different contractors to supply and fit a physical protection system is complicated and often does not give the best result. With Damasec, you don't have to. We find the best total solution and install it on your premises.

Ethical. Proactive. Confidential. Our values guide everything we do.
